The Recon Master
Parthiv Patel – 216838914

- The Recon Master Analyze the behaviour of the server that is given by user.

- It conducts some tests related to ICMP pings and detects whether the server responds to ICMP pings

- It conducts some tests related to TCP on port 80 and detects whether the server responds to TCP SYN requests and determines whether SYN cookies are deployed by the service/server on port 80

- To run the Recon Master script:
    a) open terminal/cmd
    b) cd to the path where the script is stored
    c) execute the following command: python3 recon.py
    d) Input the URL/IP you need to perform reconnaissance
    e) Wait for the code to finish (it may take upto a minute as it may be sniffing in the background)
